Sampling

- Submit one sample for each paddock. Samples from paddocks intended for autumn sowing should be submitted first.
- Samples should be taken in the following manner:
 - Take one trowel full of soil (to 15 cm depth) every 2 – 3 steps across the paddock in a giant 'W' pattern. Ensure that these subsamples are representative of all parts of the paddock.
 - Remove large stones etc.
 - Mix the soil well in a bucket and take from this sample no less than 6 litres (1.5 gallon) (eg. one and a half **FULL** 4-litre or three **FULL** 2-litre ice-cream containers).
 - Label each sample with the paddock code.
 - Indicate paddock code with area and cropping history on this form.
- Submit samples with this completed form to:

AsureQuality
Plant Health Lab
South Drive
Lincoln University
Canterbury
- Make sure that the packaging is strong enough to withstand the transport and that a copy of this form accompanies each sample from each property.
- Indexing involves growing peas in the soil sample for four to five weeks. Hence results will not be available until five to six weeks after receipt of the samples.
- Samples will be tested as they arrive at the laboratory. AsureQuality takes no responsibility for the sampling.

| | | Laboratory use only |
|----------------------------|--|---------------------|
| Paddock code and area (ha) | Crop history last 4 years | Sample # |
| 1 | 19/20 18/19 17/18 16/17 Peas last grown in (season): | |
| 2 | 19/20 18/19 17/18 16/17 Peas last grown in (season): | |
